BOOK	Building Web Applications with Django <i>Packt Publishing, 2024</i> Comprehensive guide to modern Django development covering Django 4.2, Django Ninja APIs, pytest, Docker, and Kubernetes deployment.	
EDUCATION	Licenciatura en Ciencias de la Computación Facultad de Ciencias Exactas, Universidad de Buenos Aires, Argentina	
LANGUAGES	Spanish (native), English (fluent)	
TECHNICAL SKILLS	Languages: Python, Go, Rust Frameworks: FastAPI, Flask, Django, Django Ninja Databases: PostgreSQL, Redis Infrastructure: Docker, Kubernetes, AWS, Terraform, Nix Messaging: RabbitMQ, Kafka Testing: Pytest, BDD	
PROFESSIONAL EXPERIENCE	● Sep 2021 – Present: Sendcloud Designed and implemented microservices to modernize the codebase from a monolithic application. Proposed and executed technical solutions to improve architecture and promote good software engineering practices such as BDD to enhance communication and quality. Provided technical support for AWS Cloud Infrastructure using Terraform, Docker, and Kubernetes. Assisted in the onboarding and training of new teams. ● Oct 2020 – Sep 2021: Wildlife Studios Worked as a backend engineer on a real-time service processing millions of events to support business-critical models, utilizing Golang, Ruby, and Python. Contributed to a product with over 300 million users. ● Mar 2019 – Oct 2020: FaradaySec (Principal Software Engineer) Key role in growth and technical direction. Collaborated with cross-functional teams. Developed features for the vulnerability management product. Promoted best practices: TDD, CI/CD, automation. Led migration from CouchDB to PostgreSQL. ● Mar 2017 – Mar 2019: FaradaySec (Senior Software Developer) Planned and implemented new features for the vulnerability management product. Promoted software engineering best practices. ● Mar 2016 – Mar 2017: IBIOPA (Max Planck Partner) Full-time Licenciatura thesis at IBIOPA (CONICET), focusing on data mining to discover new drug candidates for cancer and other diseases. Developed a novel algorithm for retrospective evaluation of ligand-protein simulations.	

- **Jan 2013 – Mar 2016: Onapsis**
JS/Python developer on a vulnerability scanner. Built a satellite project with Django and Salesforce API for automatic product delivery. Technical Leader managing a team of four. Developed frontend features including PCI Compliance reports.
- **Jan 2012 – Jan 2013: SCV**
Java/Python developer on a project supporting advanced energy services for homes.
- **Dec 2010 – Jan 2012: VerkkoStadi (Dominican Republic)**
Worked on a dating site and cloud OCR processing approximately 5 million images per day using Python web2py and MySQL.

PUBLICATIONS **Algorithmic development for the design of ligand and un-biased decoy databases for protein-ligand docking**
October 2015 — Development and benchmarking of high throughput docking using experimental structures or homology models.

HOBBIES Cycling, Photography
